

## **USAID PAT Implementation Training Epi Info Assignment #2**

In the following assignment, you will refresh your Epi Info skills by: (1) performing data entry, (2) comparing and cleaning data, and (3) calculating the poverty level.

1. Use the completed questionnaires provided to perform double entry of values in the Epi Info template for India (USAID\_PAT\_INDIA.mdb).
2. Compare the two databases to check for any data entry errors.
3. Identify and replace any outlier or inconsistent values in age of the household head (hhage), number of members in the household (hhsiz), or number of household members with no formal education (numnoeduc).
4. What is the percentage of “very poor” households in this sample?
5. Show your results to a facilitator so he or she can review your assignment results.

Thanks!
